

ABSTRACT

A card attachment/detachment device includes a card accommodation section arranged at any one of the body and the lid; a terminal arranged at the other to come into contact with a card placed in the card accommodation section and to press the card toward the card accommodation section; a stopper section constituting a part of a card insertion/removal opening communicating with the card accommodation section and coming into contact with a part of the card placed in the card accommodation section; and a first biasing means pressing the card toward the stopper section when the card is placed in the card accommodation section and ejecting the card to the outside through the card insertion/removal opening when the card is removed from the card accommodation section.
